SOLAR KA HAAL SUNAO!

- Turn your solar ROI anxiety into peace of mind
- Know your electricity bill—before it arrives

If you're an on-grid solar user with net metering installed, you've probably seen all the solar units your system is generating on your inverter app. So then why does your electricity bill still feel unusually high? You're probably wondering, "But I have net metering! Shouldn't my bill be lower than this?"

The truth is, most on-grid systems will only tell you half the story: how much solar power you're generating. What they won't tell you is how much of that power your home actually uses, how much of it is exported to the grid, or what's really going on behind the scenes during peak hours and load shedding.

Without the full picture, it's no wonder you're left anxiously guessing in the dark. But why settle for uncertainty when a smarter solution exists?

Turn solar anxiety into peace of mind with JWM Wares.

With JWM Wares' "Solar Ka Haal" solution, you get the *complete* picture behind your system's performance:

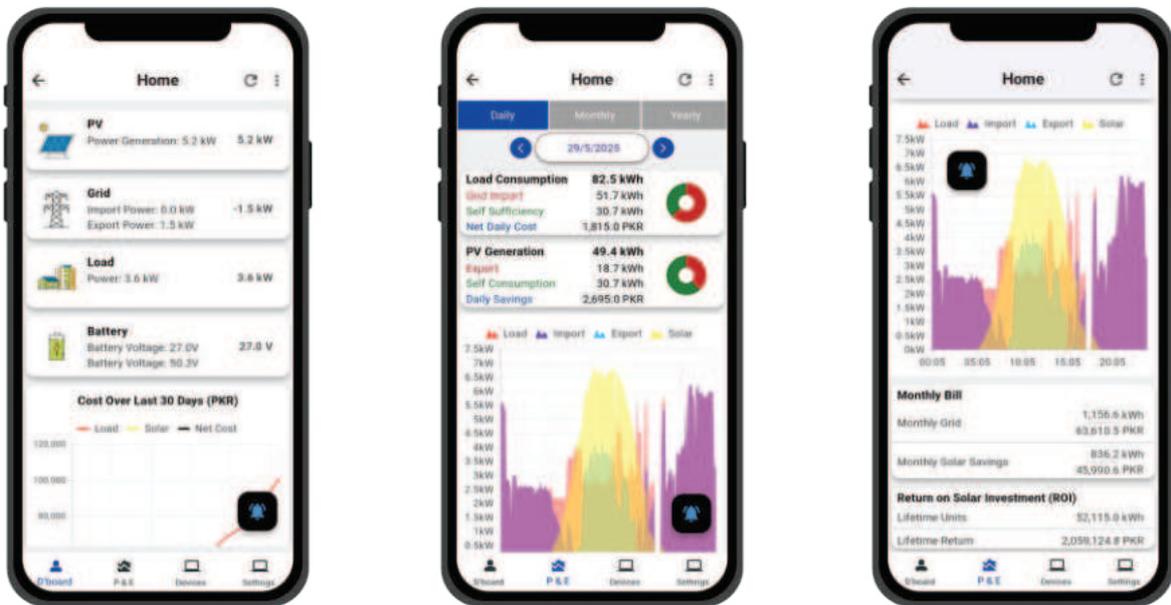

- See how much solar power is being generated by your system, used up at home, or exported to the grid at any moment.
- Monitor your daily, monthly, and yearly energy usage and solar performance.
- Track your grid imports and exports in real-time.
- Spot when your solar system is being underutilized—or performing at its peak.
- Know how much energy you're losing during load shedding so you can optimize your energy
- Identify peak consumption times and usage
- Keep a running estimate of your monthly electricity bill—**before** it arrives.

JWM Wares gives you accurate insights and meaningful data so you can make wiser energy decisions with clarity and confidence.

And the best part? It's perhaps the most cost-effective energy investment you've ever made, requiring only the ultra-affordable **JWM Energy Analyzer!**

Know Your Energy Facts Like a Pro

JWM Wares' "Solar Ka Haal" solution is complemented by the Enbryx mobile app, your real-time dashboard for energy insights.

The Enbryx app  is available for download on both the Apple App Store and on Google Play 

From solar usage to import/export tracking and smart analytics, our solar systems have been designed to lay their heart out on the table—all so you can sleep easy and plan your energy future with confidence.
