## TENSION MUKAO, MUNAFI BARHAO!

### Cut Down Your Shop's Electricity Bill with JWM Wares' Bill Assurance Toolkit

Running a corner shop during the hot summer months is tough—especially when the electricity bill keeps going up. Heavy-duty appliances like commercial refrigerators and deep freezers are essential, as they keep meat, dairy, cold drinks, and frozen items fresh and ready for customers. But these appliances also use a lot of electricity.

On the one hand, you can't turn your fridge off for very long periods without spoiling your goods. But on the other, keeping these energy-inefficient appliances running all day is a sure-fire way to send your electricity bill through the roof!

So what can shopkeepers do?

#### **JWM Wares has the solution for you.**

Our "Tension Mukao, Munafi Barhao" solution is designed to give shopkeepers and other commercial users full control over their electricity billing and usage. With the help of the **Enbryx mobile app**, our clients can create customized electricity usage profiles that automate how their refrigerators and deep freezers run throughout the week.

For instance, shop keepers can pre-program their freezers so that they stay on when they know there will be a busy period at the store, but automatically switch off for a short pre-defined time when they know it will be more quiet. In this way, the system allows you to **save electricity** and **reduce your bill**, while also making sure your items stay safe and fresh for customers!

Another feature of the "Munafi Barhao" solution is that it allows you to track your running electricity bill for the month—so that you're never caught by surprise again! For even more control, shopkeepers and commercial users can subscribe to our **Bill Assurance** service. With this service, all you have to do is enter your target electricity budget for the month, and our system will handle the rest

Here's how it works:

- **First**, the system records how much electricity your shop is using in real-time
- **Next**, it tracks your peak hours of consumption, as well as which of your appliances are using the most electricity
- **Finally**, the system intelligently manages how much electricity to allocate to each of your loads—including your refrigerator, freezer, and other electrical appliances—so that you never go over your budget!

Total control over your electricity bill is finally in your hands.

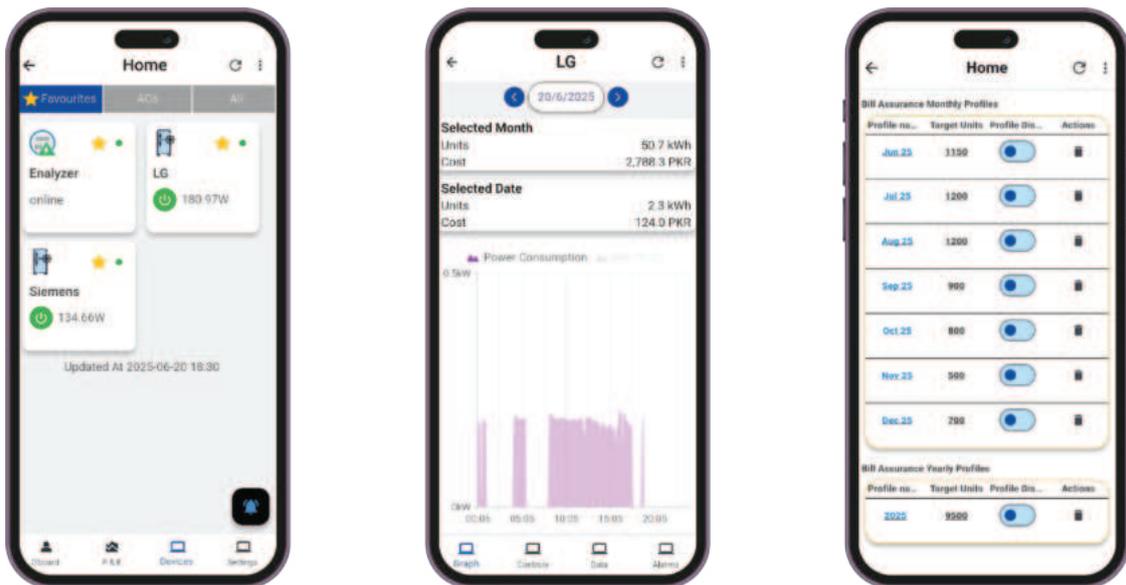

**And the best part?** It may be the most cost-effective energy investment you'll ever make!

## Cut Costs and Stay in Control—Right from Your Smartphone

With the Enbryx mobile app, you'll gain full access to our bill assurance tool suite. With this suite you can:

- Set and track your monthly and yearly bill targets
- Monitor the live energy consumption of each of your appliances
- Receive alerts when your energy usage starts exceeding your budget
- Enable controls that enforce your set budgets
- Review historical consumption trends and track your system's performance

With accurate insights and meaningful data, JWM Wares gives you the clarity and confidence you need to start making wiser energy decisions.

Whether you're running a corner store or small business, the Enbryx mobile app puts full energy control into the palm of your hands. Download now and start saving today!

The Enbryx app  is available for download on both the Apple App Store and on Google Play
